

如下图所示，点击防火墙按钮无法打开

操作步骤：

1、右击桌面空白处打开终端

2、打开防火墙配置文件

`sudo vim /etc/kylin-firewall/kylin-firewall.conf` (输入开机密码, 并且密码是隐藏的, 输完回车即可)

```
kylin@kylin-greatwall: ~/桌面
文件(F) 编辑(E) 视图(V) 搜索(S) 终端(T) 帮助(H)
kylin@kylin-greatwall:~/桌面$ sudo vim /etc/kylin-firewall/kylin-firewall.conf
输入密码
```

3、按 i 键, 进入插入模式

```
kylin@kylin-greatwall: ~/桌面
文件(F) 编辑(E) 视图(V) 搜索(S) 终端(T) 帮助(H)
#       Only public Firewall mode is available
#       Network connections bind with private Firewall mode may not function properly
#
#       private
#       For use in private areas.
#       You mostly trust the other computers on networks to not harm your computer.
#       Only private Firewall mode is available
#       Network connections bind with public Firewall mode may not function properly
#
#       off
#       No Firewall mode work
#       For use in trust areas.
#       You trust the other computers on networks are friendly.
#
Mode=off
~
-- 插入 --                               29,1           底端
```

4、修改配置文件，如下图所示

```
kylin@kylin-greatwall: ~/桌面
文件(F) 编辑(E) 视图(V) 搜索(S) 终端(T) 帮助(H)
#       Only public Firewall mode is available
#       Network connections bind with private Firewall mode may not function properly
#
#   private
#       For use in private areas.
#       You mostly trust the other computers on networks to not harm your computer.
#       Only private Firewall mode is available
#       Network connections bind with public Firewall mode may not function properly
#
#   off
#       No Firewall mode work
#       For use in trust areas.
#       You trust the other computers on networks are friendly.
#
#Mode=off
Zone=disable

-- 插入 --                               26,13   底端
```

5、按 **Esc** 键，再输入 **:wq** ，回车

```
kylin@kylin-greatwall: ~/桌面
文件(F) 编辑(E) 视图(V) 搜索(S) 终端(T) 帮助(H)
kylin@kylin-greatwall:~/桌面$ sudo vim /etc/kylin-firewall/kylin-firewall.conf
输入密码
kylin@kylin-greatwall:~/桌面$ █
```

6、打开安全中心进行测试，至此修复完成
